HITTING THE VISIBILITY SWEET SPOT END-TO-END TRACEABILITY FOR SWEETENER MANUFACTURER

A consumer goods manufacturer of artificial and natural sweeteners was struggling to track production in real time. A lack of integration and an overreliance on manual processes was making it difficult to capture accurate data on the company's many different brands. There was no candy-coating the impact on supply chain visibility – and the knock-on effect on efficiency and compliance. The company deploys SAP at its global manufacturing facilities but integrating production data was increasingly hit and miss due to an unreliable barcode system. The need to manually verify data transfer into SAP was impacting productivity and efficiency.

“ACSIS software ensures data integrity on a 24/7 basis. It validates and makes available information entered into the system even during SAP maintenance periods or network outages.”

CHALLENGES

- Capturing real-time data for multi-step manufacturing of multiple different brands
- Lack of integration of shop-floor data with SAP
- Unreliable barcode system that required manual verification of data transfer into SAP
- Significant risk to compliance, productivity, and efficiency

SOLUTION

- ACSIS Product Traceability provides end-to-end traceability of raw materials and products
- Real-time data integration between new barcoding system and SAP
- Data transfer automatically validated for completeness and accuracy
- Extensive automation of transactions e.g., goods receipt to procurement / production order, SLOC to SLOC, cycle count etc.

BENEFITS

- Real-time granular traceability across the entire supply chain
- Step change in productivity and efficiency
- 24/7 data quality and integrity
- Trusted system of record for easier compliance
